the first value below refers to the rom location, the second value is the value to put in.

SET(0x25077,0x28) P1 touchback default is 0x10

SET(0x25090,0xC8) P1 touchback default is 0xF0

Every 0x08 equals one yard.

Hence for p1 we want 5 times 0x08 = 0x18. 0x10 + 0x18= 0x28.

For P2 we need to subtract since the field location goes from left to right.

So 0xF0 - 0x28 = 0xC8

it might also help to add the touchback on kickoffs hack

Kickoff touchbacks

Can kickoffs be programmed to go out of the endzone for a touchback?

By Bodom, September 7, 2011 13 replies

These set commands will take care of kickoff touchbacks:
SET(0x2411C,0x205790) SET(0x248A4,0x207090) So now kickoffs out of the endzone will be touchbacks. Also, if u get tackled in the endzone on a kickoff it ...

.....

because as is, there are no touchbacks on kickoffs.

note that this hack is somewhat flawed because a kick returner can come out of the endzone and go back into it and still be awarded the touchback.

so play honest.

SET(0x25077,0x28) P1 touchback default is 0x10

For me this SET command was placing the touchback for P1 at the 23 yard line.

Used: SET (0x25077, 0x38)

Now it is on the 25 yard line.
